

D.B. Roberts Company

SERVICE CENTER

In keeping with our goal of quality customer care, D.B.Roberts Company now offers technical support and equipment service at our Peachtree City location. We can assist you with any issues related to Pemsarter presses, as well as maintenance and repair of pneumatic and pneumatic/hydraulic rivet guns.

PEMSERTER TECHNICAL SUPPORT

D.B.Roberts Company offers complete technical support, by one of our factory trained field service technicians, for the PEMSERTER Series LT/4, Series 4, and Series 2000 presses. We provide free phone support to assist you with troubleshooting, applications issues, and tooling matters. DBR also offers on-site technical support to get your press operational.

If your PEMSERTER Series 4 model is not meeting your current requirements due to obsolescence or wear, send it to our Peachtree City Service center for fast and accurate repair by our factory trained technician and get it back on your shop floor making you money. We will start by inspecting, evaluating, and notifying you of needed repairs. Then, select the refurbishment level that suits your situation. Why spend thousands on a complete rebuild and cosmetics when a refurbishment, specific to your machine, is all you need?

RIVET GUN MAINTENANCE & REPAIR

Our service center also performs maintenance and repair on a vast array of rivet gun models from various manufacturers. We provide fast, reliable, and cost effective service. If you have a significant number of rivet guns, you may be interested in a maintenance program. This will insure that your rivet guns will be operating properly and keep production moving.
