

## PRODUCT ENHANCEMENT

September 2011

### **Models 9301, 9307, and 9308 – New Carriage Bolt Hole**

Based on customer feedback and our guiding principle of continual improvement, Accuride announces the addition of carriage bolt holes to heavy-duty 9301, 9307, and 9308 slide products. Designed to accommodate applications such as utility and emergency vehicle storage, toolboxes, and industrial equipment trays and drawers, this addition provides for a single-tool installation, which simplifies and speeds mounting, reducing labor time by up to 50%.

The new square carriage bolt holes accommodate #10 carriage bolt or M-6 fasteners. Holes are located adjacent to existing mounting holes.

### **Availability/Packaging**

The carriage bolt holes have been incorporated into the manufacturing of all 9300 products. There is no price adjustment for this enhancement; packaging, kits, and bracket information for these products also remains the same.

Thank you for your continued support. As always, Accuride remains committed to excellence in product design, quality, and service. We appreciate and welcome your feedback.

Sincerely,

Calvin Luce  
Director of Distribution Sales
