

OFBLT-C1-5

Benefits:

- Holds the OFBLT, bend limiting tubing, securely in place
- Prevents fiber damage and movement
- Releasable to allow removal of the tubing
- Other bases are available by special order

Target Markets:

- Electronics
- Telecom
- Datacom
- Automotive

Richco is pleased to announce the addition of the OFBLT-C1-5 to our line of fiber optic products. The new clip is a secure method of fixing and holding Richco's OFBLT (Optical Fiber Bend Limiting Tubing) in place when optical fiber is routed and managed in an application (racks, panels, cabinets and even the car). The OFBLT has a .20" outside diameter. The clip replaces the need to use conventional fiber fixing and management products such as cable ties. The clip ensures safe retention of the OFBLT tubing and keeps the fiber in place preventing movement of the tube and therefore offering fiber protection. The clips are also releasable; simply lift the tab on the side of the clip to remove the tubing. The clip is mounted with an arrowhead style base for a .250" hole, for use in a panel thickness of .031" - .078". The clip is available in both UL 94V2 and UL 94V0 rated material. To view all fiber optic products, refer to Richco's catalog or the Richco website at www.richco-inc.com.

OPTICAL FIBER BEND LIMITING TUBING CLIP OFBLT-C1-5
