

SVF-1

Features:

- Shock absorbing and vibration dampening
- Durable Thermoplastic Elastomer material
- Aesthetic exterior appearance for your application

Benefits:

- Can be used with many different chassis thicknesses
- Variety of mounting options
- Easily installed by hand

To add to Richco's extensive line of Bumpers & Feet, Richco is pleased to announce the launch of the SVF-1, a shock absorption and vibration dampening foot. The SVF-1 is ideal in applications where there is a significant amount of movement and vibration such as in digital video recorders, players, cooling fans, and hard disk drives. The uniquely designed shape in combination with a Thermoplastic Elastomer material provides spring-like shock absorption reducing and vibration dampening characteristics. The foot is designed to be easily installed by hand, and can accommodate varying panel thicknesses, from .012" to .169", by offering the use of a range of mounting options. Using a Richco SR Series Rivet or a #8 screw will lock the foot into place in your application. The uncompressed height of the foot is .32" with a diameter of 1.5". The SVF-1 is made of a durable TPE material and is available in black. To review our other Bumpers & Feet please refer to the Richco Full Line Catalog or our website at www.richco-inc.com.
