

TL-F1

Richco is pleased to announce the addition of the TL-F1 series. This addition complements Richco's extensive line of twist lock clamps. The TL-F1 series gives a quick and simple solution for cable identification. The twist lock feature enables the TL-F1 to be fastened securely and released by hand, alleviating the need for a special installation tool. The large "flag-shape" area allows ease of identification; self-adhesive warning labels can be easily affixed or the area can be written on with a marker pen. The TL-F1 series can accept a large range of cable diameters/bundles. The series comes standard in Natural Nylon 6/6, UL94 V-2 rated material. To review our other clips, clamps, and cable management products, please refer to the Richco Full Line Catalog #26.

Features:

- Flag for identification
- Releasable
- Reusable

Benefits:

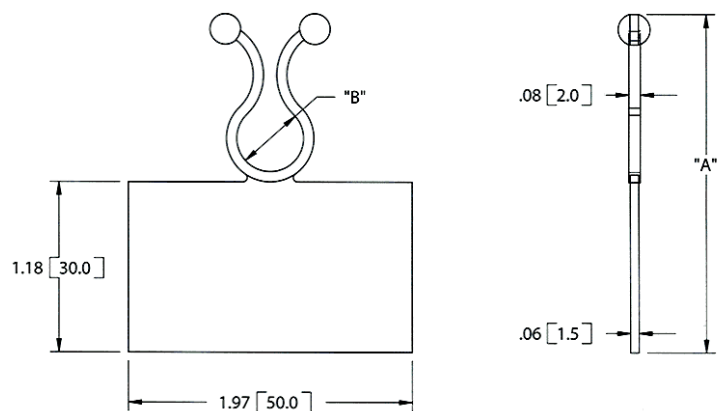

- Quick and easy to install
- Large area for identification or warning labels
- Accepts a large range of cable diameters

Target Markets:

- Automotive-Cable Harness Makers
