

CRTC-1

Benefits:

- One piece design eliminates extra parts
- Ratcheting clamp design requires no screws or hose clamps
- Clamp ratchets independent of leg positioning
- Quick assembly time
- Eliminates need for screw guns during assembly

Target Markets

- Consumer Electronics

Richco is pleased to announce the addition of the Cathode Ray Tube Clamp, CRTC-1. This addition compliments Richco's extensive line of television accessories. This clamp is used to connect the television's cathode ray tube (CRT) to the circuit board. This unique one-piece design uses a ratcheting clamp to connect to the neck of the CRT. This ratcheting clamp eliminates the need for the extra stainless steel hose clamp and screw used in other CRT clamps. The ratcheting clamp works independently from the legs allowing the user to tighten the clamp without affecting the leg position on the circuit board. Using the CRTC-1 clamp reduces the assembly time required and the need for a screw gun on the assembly line. To review our T.V. & Monitor Accessories please refer to the Richco website www.richco-inc.com.
