

Compact 125 kHz Proximity Reader Delivers Secure Access Control

Southco's new EA-P3 Proximity Card Reader provides convenient, secure, non-contact access in an easy-to-use design. Compact and low profile, the unit reads HID 125 kHz compatible proximity cards and produces a 26 bit Wiegand output common to most access control systems.

The reader can easily be combined with the Southco EA-P1 Pin/Prox reader for a complete access control system, or combined with any existing system to add keyless entry points to existing security systems.

- Keyless entry simplifies access management
- Flexible design works with existing building access control systems
- Integrated LED provides feedback of card acceptance
- Sealed, weather-resistant design with simple three-hole installation

The EA-P3 Reader is well suited to applications requiring secure interior storage or those requiring simple integration of an electronic access solution with existing proximity cards.
